- Highlights the use of computational methods to solve physical problems*
- The course will consist of lectures (both theory and practical) in the Lab*
- Evaluation done not on the programming but on the basis of formulating the problem*
- Aim at teaching students to construct the computational problem to be solved*
- Students can use any one operating system Linux or Microsoft Windows*

<b>Topics</b>	<b>Description with Applications</b>
Introduction and Overview	Computer architecture and organization, memory and Input/output devices
Basics of scientific computing	Binary and decimal arithmetic, Floating point numbers, algorithms, Sequence, Selection and Repetition, single and double precision arithmetic, underflow & overflow emphasize the importance of making equations in terms of dimensionless variables, Iterative methods

Review of C & C++ Programming fundamentals	Introduction to Programming, constants, variables and data types, operators and Expressions, I/O statements, scanf and printf, c in and c out, Manipulators for data formatting, Control statements (decision making and looping statements) ( <i>If-statement. If-else Statement. Nested if Structure. Else-if Statement. Ternary Operator. Goto Statement. Switch Statement. Unconditional and Conditional Looping. While Loop. Do-While Loop. FOR Loop. Break and Continue Statements. Nested Loops</i> ), Arrays ( <i>1D &amp; 2D</i> ) and strings, user defined functions, Structures and Unions, Idea of classes and objects

Interpolation by Newton Gregory Forward and Backward difference formula, Error estimation.	Evaluation of trigonometric functions e.g. $\sin\theta$ , $\cos\theta$ , $\tan\theta$ , etc.

Also attempt some problems on differential equations like:

1. Solve the coupled first order differential equations

$$\frac{dx}{dt} = y + x - \frac{x^3}{3}$$

$$\frac{dy}{dt} = -x$$

for four initial conditions  $x(0) = 0$ ,  $y(0) = -1, -2, -3, -4$ . Plot  $x$  vs  $y$  for each of the four initial conditions on the same screen for  $0 \leq t \leq 15$ .

2. The ordinary differential equation describing the motion of a pendulum is

$$\vartheta'' = -\sin(\vartheta)$$

The pendulum is released from rest at an angular displacement  $\alpha$  i.e.  $\vartheta(0) = \alpha$ ,  $\vartheta'(0) = 0$ . Use the RK4 method to solve the equation for  $\alpha = 0.1, 0.5$  and  $1.0$  and plot  $\vartheta$  as a function of time in the range  $0 \leq t \leq 8\pi$ . Also, plot the analytic solution valid in the small  $\vartheta$  ( $\sin \vartheta \approx \vartheta$ ).

3. Solve the differential equation:

$$x^2 \frac{d^2y}{dx^2} - 4x(1+x) \frac{dy}{dx} + 2(1+x)y = x^3$$

with the boundary conditions: at  $x = 1$ ,  $y = (1/2)e^2$ ,  $dy/dx = -(3/2)e^2 - 0.5$ , in the range  $1 \leq x \leq 3$ . Plot  $y$  and  $dy/dx$  against  $x$  in the given range. Both should appear on the same graph.

## SKILL ENHANCEMENT LAB- SEC 1 LAB

### A. MS-WORD LAB ASSIGNMENT

1. Write down the following Paragraph OR any one provided by your teacher;

Without a doubt, the Internet is one of the most important inventions of modern times. The Internet is a global interconnected computer networks which allow each connected computer to share and exchange information with each other. The origins of the Internet can be traced to the creation of Advanced Research Projects Agency Network (ARPANET) as a network of computers under the auspices of the U.S. Department of Defense in 1969.

Apply following effects on The paragraph:

- i. Paragraph **font-size** and **font-type** must be 12 Verdana.
- ii. Paragraph **alignment** must be justified and double line spacing.
- iii. **Highlight** the “(ARPANET)” with green color.
- iv. Make the “Internet” keywords **Bold and Italic**.
- v. Insert any “**WordArt**” and a **symbol** to your document.
- vi. Insert a **clipart** to your document.
- vii. Add following lines to your document:  
Internet, Intranet, Extranet, URL, WWW, Networking, Protocols, HTTP, TCP/IP

2. Create a Table of following fields:

Name, Surname, Age, Gender, Job and apply the following effects

- i. Insert 10 records
- ii. Font size should be 12
- iii. Title size should be 14
- iv. Font type should be Times new Roman
- v. Title color should be blue
- vi. Text color should be black
- vii. Table border should be 2

3. Write a letter on ‘Road Safety’ and send to ‘Multiple Recipients’ using mail merge.

4. Type the paragraph given below:

Today, the Internet is a public, cooperative and self-sustaining facility accessible to hundreds of millions of people worldwide. Physically, the Internet uses a portion of the total resources of the currently existing public telecommunication networks. Technically, what distinguishes the Internet is its use of a set of protocols called TCP/IP (for Transmission Control Protocol/Internet Protocol). Two recent adaptations of Internet technology, the intranet and the extranet, also make use of the TCP/IP protocol. Apply the following:

- i. Change Internet into Internets at a time
- ii. Heilight TCP/IP in red color
- iii. Replace protocol into protocols
- iv. Find the word “Public”

## **B. MICROSOFT EXCEL LAB ASSIGNMENT**

### **Basic Formatting and Spreadsheet Manipulation**

1. Add rows and columns to an existing spreadsheet
2. Reformat data (center, comma and currency styles, bold, text color)
3. Work with a simple formula (product) and function (sum)

### **Assignment**

1. Create a workbook as shown below.
2. To enter new rows or columns, simply click on the row or column header to select the whole row or column. Then right click with the mouse and choose insert.
3. Add the new row for S Spade with the data that’s shown below (between the original rows 7 and 8).
4. Add a column for gender and the data as shown below (between the original columns A and B). Enter the appropriate gender for yourself in the last row.

A	B	C	D
Name	Male/Female	Genre	Number of Songs
J Smith	F	Blues	50
B Doe	M	Country	110
S Spade	F	Country	200
F Zappa	M	Blues	1400
F Zappa	M	Alternative	2300
J Smith	F	Alternative	150
S Spade	F	Blues	1000
B Doe	M	Blues	75
yourname	M	Blues	800

5. Center the data in columns B and C. Do this by selecting the whole column and click the center icon on the ribbon.
6. Bold the data in row 1, the column headings (ensure that the data all remains visible within the column boundaries).
7. Change the font color for row 1 to Blue.
8. Change the format of the data in column D to comma style (no decimal places showing). There is an icon on the home tab that sets it to comma style easily.
9. Add two new column labels to the right of the current columns; **Unit Price** and **Total Cost**. (They will be in columns E and F.) These two columns of data should be currency type so that the dollar sign is shown. There is an icon to quickly format the selected column as currency type.
10. All tunes are \$.99, so enter that value for all rows in Column E. You can copy quickly by using the **Auto Fill** handle and drag that amount down. When you over your mouse over the tiny square in

the bottom right hand corner of the active cell, your mouse shape will become a skinny plus sign, and you can click and drag that cell to make a copy.

11. Calculate Total Cost (column F) as *column D times Column E*. You will type in a formula like this into cell F2: **=D2\*E2** (Be sure to begin the formula with an equal sign)
12. Use the AutoFill (skinny plus sign) again to copy the formula down column F; down to F10. Double check the picture below to make sure yours has the correct values
13. Add a border to all of the cells (A1-f10) using the Borders tool in the Fonts group on the Home Tab.
14. Change the page layout to landscape. Do this by clicking the Page Layout tab on the ribbon and then to Orientation to Landscape.
15. Save the file.
16. Click in cell F11 and Use the sum function or the shortcut icon that looks like  $\Sigma$  to get the total of the Total Cost column.
17. Ensure that the data is all visible within the column boundaries. Make the columns wider if needed.
18. Save the workbook. Your final spreadsheet should look like the following when printed.

Name	Male/Female	Genre	Number of Songs	Unit Price	Total Cost
J Smith	F	Blues	50	\$ 0.99	\$ 49.50

**GROUP-A****60 Lectures**

Use C/C++/Scilab for solving the following problems based on Quantum Mechanics like

1. Solve the s-wave Schrodinger equation for the ground state and the first excited state of the hydrogen atom:

$$d^2y/dr^2 = A(r)u(r), A(r) = 2m/h^2 \times [V(r) - E] \text{ where } V(r) = -e^2/r$$

Here, m is the reduced mass of the electron. Obtain the energy eigenvalues and plot the corresponding wavefunctions. Remember that the ground state energy of the hydrogen atom is

$$\approx -13.6 \text{ eV. Take } e = 3.795 \text{ (eV}\mathring{\text{A}})^{1/2}, \hbar c = 1973 \text{ (eV}\mathring{\text{A}}) \text{ and } m = 0.511 \times 10^6 \text{ eV}/c^2.$$

2. Solve the s-wave radial Schrodinger equation for an atom:

$$d^2y/dr^2 = A(r)u(r), A(r) = 2m/h^2 * [V(r) - E]$$

where m is the reduced mass of the system (which can be chosen to be the mass of an electron), for the screened coulomb potential  $V(r) = -e^2/r \times (e^{-r/a})$

Find the energy (in eV) of the ground state of the atom to an accuracy of three significant digits. Also, plot the corresponding wavefunction. Take  $e = 3.795 \text{ (eV}\mathring{\text{A}})^{1/2}$ ,  $m = 0.511 \times 10^6 \text{ eV}/c^2$ , and  $a = 3 \mathring{\text{A}}, 5 \mathring{\text{A}}, 7 \mathring{\text{A}}$ . In these units  $\hbar c = 1973 \text{ (eV}\mathring{\text{A}})$ . The ground state energy is expected to be above -12 eV in all three cases.

3. Solve the s-wave radial Schrodinger equation for a particle of mass m:

$$d^2y/dr^2 = A(r)u(r), A(r) = 2m/h^2 \times [V(r) - E]$$

For the anharmonic oscillator potential  $V(r) = \frac{1}{2} kr^2 + \frac{1}{3} br^3$  for the ground state energy (in MeV) of particle to an accuracy of three significant digits. Also, plot the corresponding wave function. Choose  $m = 940 \text{ MeV}/c^2$ ,  $k = 100 \text{ MeV fm}^{-2}$ ,  $b = 0, 10, 30 \text{ MeV fm}^{-3}$ . In these units,  $\hbar c = 197.3 \text{ MeV fm}$ . The ground state energy I expected to lie between 90 and 110 MeV for all three cases.

4. Solve the s-wave radial Schrodinger equation for the vibrations of hydrogen molecule:

$$d^2y/dr^2 = A(r)u(r), A(r) = 2\mu/h^2 \times [V(r) - E]$$

Where  $\mu$  is the reduced mass of the two-atom system for the Morse potential

$$V(r) = D (e^{-2\alpha r'} - e^{-\alpha r'}), r' = (r-r_0)/r$$

Find the lowest vibrational energy (in MeV) of the molecule to an accuracy of three significant digits. Also plot the corresponding wave function.

$$\text{Take: } m = 940 \times 10^6 \text{ eV}/c^2, D = 0.755501 \text{ eV}, \alpha = 1.44, r_0 = 0.131349 \mathring{\text{A}}.$$
